

## Find the few problems that cause most of the pain. Then fix those first.

Most leaders can name the symptoms: productivity is off, inventory is too high, orders ship late. The hard part is knowing which problems matter most, what is causing them, and what to fix first. That is what the Assessment answers, and why more than 90% of our engagements start here.

### HOW IT WORKS

#### Two days on site. A roadmap in two to three weeks.

- **Two days on site**, three for multi-channel or multi-site operations. We interview the people closest to the work, walk the floor, and review your operating data.
- **80/20, not a mega-study**. We look for the small number of issues driving most of your operational cost and delay.
- **Your team is in the room**, so the findings are theirs too, not a consultant's report that sits on a shelf.
- **Read-out on the last day on site**, then a written Assessment Report and an executive presentation with Q&A, typically two to three weeks later.

### DELIVERABLES

#### What you get

- **Prioritized improvement opportunities**, including quick wins you can start on immediately.
- **Recommended projects**, each with objectives, the tools we would use, scope, timing, the consulting fee, and the return on investment where the data supports it.
- **A vision of the future state** and the longer-term strategic initiatives behind it.
- **Nominated implementation team** and timing. You decide what to run, in what order, and whether to run it with us or on your own.

### BEFORE WE ARRIVE

#### What we need from you

A short data package, which most clients already have: roughly 12 months of demand and purchase history at SKU level, current inventory, any performance measures you already track, an org chart and a facility drawing. Getting it to us ahead of time is what keeps the Assessment to two days.

**190+**

clients since 1998

**900+**

projects delivered

**5**

average improvement projects per client

**90%**

of engagements start with an Assessment

### RESULTS

#### What it looks like in practice

##### POLYURETHANE MANUFACTURER

**Chemline.** The CEO put operations and supply chain problems at \$3 to \$4 million a year in lost profit. After the Assessment roadmap: first-pass yield 81.3% to 94.3%, on-time delivery 67% to 97%, shipping errors from two a month to zero.

##### 3PL MANAGED SERVICES

**Redwood Managed Services.** The Assessment led to a cross-functional Kaizen that identified 45 improvement projects worth \$15M+ in annualized savings, seven implemented within weeks.

### COMMON QUESTIONS

#### Before you ask

**We already know our problems.** Usually you are right about the symptoms. The Assessment finds the cause and the order to fix things in, which is where projects fail.

**Is this just a way to sell us projects?** We do not walk in with a predetermined solution. Every project comes with its scope, fee and expected return up front, and you can implement any of them without us.

**We cannot spare the team for weeks.** You will not need to. Two days on site, scheduled around the operation.

“What stood out the most was their ability to balance objective analysis with practical recommendations. The output was not just diagnostic. It included concrete next steps such as a 90-day roadmap.”

**Jayson Wickenkamp**, Senior Vice President and General Manager, Image Solutions

### Next step

Reply to this email or call Ray Davis at (919) 345-8789 and we will scope the Assessment for your operation and facilities.
